

Speaker Profile:

- *Dr S Raghunandan, General Manager and Head, Advanced Technologies Division, Samsung India Software Operations, Bangalore*
- *ME and Ph.D. from the Indian Institute of Science, Bangalore*
- *About 16 years of Industry experience*
- *Worked in a wide spectrum of Technologies – Multimedia, Networking, Telecom, Consumer Electronics, Signal Processing, Pattern Recognition, etc.*
- *Current role – In-charge of incubating new areas, research, standardization, realization of ideas up to first commercialization, etc.*

Title: *Towards Simple, Rich and Invisible Technologies for Mobile Users in the Era of Convergence*

Abstract:

The world of mobile communications is exploding in terms of technological innovations coming by ever so frequently. There have been ups and downs in terms of the end-user experience. More innovations have sometimes met with grand success and sometimes with confusion. The challenge now is to re-align our energies to focus on what makes the life of the end-user simpler, richer and less confusing. This is possible only if all our innovations are very creative and at the same time hidden from the end user. This talk gives an overview of the various innovations over the last few years, which have contributed towards making Technologies Invisible and Enriching.
